

Robot Framework RequestsLibrary

- Test Cases: Checkout Diner Set from Store Service
- Tasks:
- 1.Get Product List
 - o input URL PATH: /api/v1/product
 - o input HTTP Method: GET
 - input HTTP Headers: Accept application/json
 - o assert http status code should be 200
 - assert products should have 2 items
 - assert products should contain '43 Piece dinner Set'

2.Get Product Detail

- o input URL PATH: /api/v1/product/{product id}
- input HTTP Method: GET
- input HTTP Headers: Accept application/json
- assert http status code should be 200
- assert product name should contain '43 Piece dinner Set'

- Test Cases: Checkout Diner Set from Store Service
- Tasks:
- 3.Order Diner Set
 - o input URL PATH: /api/v1/order
 - input HTTP Method: POST
 - input HTTP Headers: Accept application/json
 - input HTTP Headers: Content-Type application/json
 - input HTTP Body
 - assert http status code should be 200
 - o assert product total price should be 14.95

4.Confirm Payment

- input URL PATH: /api/v1/confirmPayment
- input HTTP Method: POST
- input HTTP Headers: Accept application/json
- input HTTP Headers: Content-Type application/json
- input HTTP Body
- assert http status code should be 200
- o assert notification message should be 'วันเวลาที่ชำระเงิน 1/3/2020 13:30:00 หมายเลขคำสั่งซื้อ 8004359104 คุณสามารถติดตามสินค้าผ่านช่องทาง Kerry หมายเลข 1785261900'

PATH: /api/v1/product

Method: GET

Headers: Accept application/json

PATH: /api/v1/product/{product id}

Method: GET

Headers: Accept application/json

PATH: /api/v1/order

Method: POST

Headers: Accept application/json

Headers: Content-Type

application/json

Body

PATH: /api/v1/confirmPayment

Method: POST

Headers: Accept application/json

Headers: Content-Type

application/json

Body

http status code is 200 product total price is 14.95

notification message is 'วันเวลาที่ ชำระเงิน 1/3/2020 13:30:00 หมายเลขคำสั่งชื้อ 8004359104 คุณ สามารถติดตามสินค้าผ่านช่องทาง

Kerry หมายเลข 1785261900'

Get Product List

http status code is 200
products have 2 items
products contain '43 Piece dinner
Set'

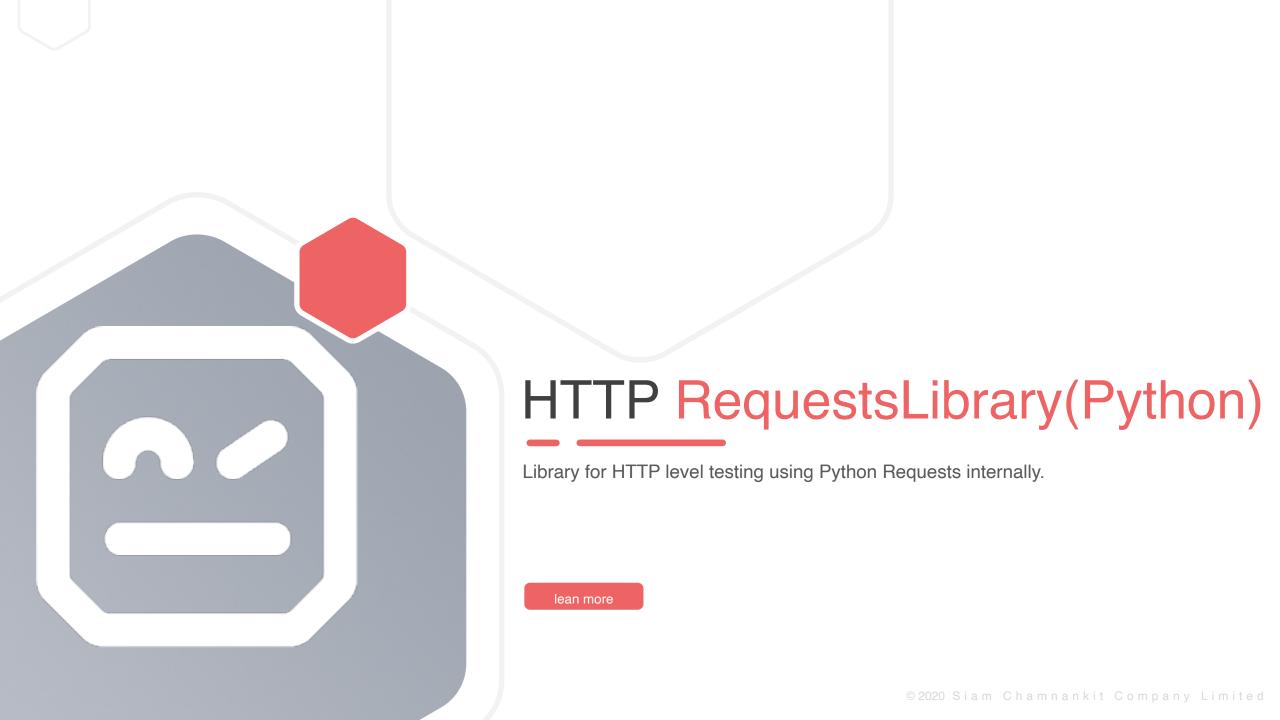

http status code is 200 product name is '43 Piece dinner Set'

© 2020 Siam Chamnankit Company Limited

- •How to pass the id from 'Get Product List' to 'Get Product Detail' id?
- •How to pass the return order id from 'Order Diner Set' to 'Confirm Payment' order id?
- •Which parameters in each task that we have to concern?
 - consequence
 - •specific

Prerequisite

- 1. Python3
- 2. Robot Framework pip install robotframework
- 3. HTTP RequestsLibrary(Python) pip install robotframework-requests

Get Product List

Assert Product List(Task)

Request:

Get Product List url = api/v1/product

Get Product List header = Accept=application/json

Response:

Assert http status code = 200

Assert product total = 2

Create Checkout Diner Set(Test case)

checkout-success.robot

Create Create Session(Task)

```
*** Test Cases ***

Checkout Diner Set

Create Session toy_store http://localhost:8000
```

RequestsLibrary Create Session API

lean more

Create Session | alias, url, headers={}, cookies={}, auth=None, timeout=None, proxies=None, verify=False, debug=0, max retries=3, backoff factor=0.1, disable warnings=0, retry status list=[], retry method list=['DELETE', 'OPTIONS', 'HEAD', 'PUT', 'GET', 'TRACE']

Create Session: create a HTTP session to a server

alias Robot Framework alias to identify the session

url Base url of the server

headers Dictionary of default headers

cookies Dictionary of cookies

auth List of username & password for HTTP Basic Auth

timeout Connection timeout

proxies Dictionary that contains proxy urls for HTTP and HTTPS communication

verify Whether the SSL cert will be verified. A CA BUNDLE path can also be provided.

debug Enable http verbosity option more information

https://docs.python.org/2/library/httplib.html#httplib.HTTPConnection.set_debuglevel

max retries Number of maximum retries each connection should attempt. By default it will retry 3 times in case of connection errors only. A 0 value will disable any kind of retries regardless of other retry settings. In case the number of retries is reached a retry exception is raised.

disable warnings Disable requests warning useful when you have large number of testcases

backoff_factor Introduces a delay time between retries that is longer after each retry. eg. if backoff_factor is set to 0.1 the sleep between attemps will be: 0.0, 0.2, 0.4 More info here: https://urllib3.readthedocs.io/en/latest/reference/urllib3.util.html

retry_method_list List of uppercased HTTP method verbs where retries are allowed. By default retries are allowed only on HTTP requests methods that are considered to be idempotent (multiple requests with the same parameters end with the same state). eg. set to ['POST', 'GET'] to retry only those kind of requests.

retry status list List of integer HTTP status codes that, if returned, a retry is attempted. eg. set to [502, 503] to retry requests if those status are returned. Note that max_retries must be greater than 0.

Get Product List(Task)

checkout-success.robot

```

RequestsLibrary Get Request API

lean more

Get Request

alias, uri, headers=None, data=None, json=None, params=None, allow_redirects=None, timeout=None

Send a GET request on the session object found using the given alias

alias that will be used to identify the Session object in the cache

uri to send the GET request to

params url parameters to append to the uri

headers a dictionary of headers to use with the request

data a dictionary of key-value pairs that will be urlencoded and sent as GET data or binary data that is sent as the raw body content

json a value that will be json encoded and sent as GET data if data is not specified

allow_redirects Boolean. Set to True if POST/PUT/DELETE redirect following is allowed.

timeout connection timeout

checkout-success.robot
